Descriptors-*Curriculum, Degrees (Titles), *Directories, Graduates, *Higher Education, National Surveys, Questionnaires, *Student Enrollment, *Technical Education

Of 1,929 institutions surveyed, questionnaires were obtained from 98.9 percent. The survey revealed organized occupational curriculums of at least 1 but less than 4 years in length in 879 institutions of higher education in the United States. The 1962 enrollment of 274,725 students in technical or semiprofessional level curriculums represented an increase of 10.8 percent over that of 1960. The five leading curriculum areas in terms of 1962 enrollments were business and commerce, electrical technology, mechanical technology, health service, and architectural and civil technology. Tabular data are presented for the number of graduates in 1961-62 and enrollment in fall 1962 in (1) engineering-related organized occupational curriculums of 1, 2, or 3 years by control, state, and institution, (2) technician level engineering-related curriculums of 1, 2, or 3 years by type of award, Engineers Council for Professional Development accreditation, curriculum and institution, (3) non-engineering-related curriculums of 1, 2, or 3 years by control, state, and institution, and (4) technician or semiprofessional level non-engineering-related curriculums of 1, 2, or 3 years by type of award, curriculum, and institution. FOREWORD

This guide has been prepared from information obtained in the sixth national survey of enrollments and graduates in undergraduate organized occupational curriculums at institutions of higher education. Such curriculums require 1, 2, or 3 academic years of study; and successful completion is recognized by the granting of associate degrees, certificates, diplomas, or similar awards. Graduates are prepared for immediate employment as technicians or for other kinds of jobs found on the employment spectrum between those at the professional level which usually demand a bachelor's or higher degree for entry and those of craftsmen, clerks, and others who perform routine tasks which do not require specialized training beyond high school.

There has been a quickening interest in this area, not only among manpower analysts and educational planners, but also among legislators. The Higher Education Facilities Act of 1963 (P.L. 88-204) makes it possible for the Federal Government to provide grants to support 40 percent of the cost of academic facilities of public community colleges and public technical institutes and up to one-third of cost of facilities in other public or private nonprofit institutions of higher education. The Vocational Education Act of 1963 (P.L. 88-210) makes permanent the Federal financial support for the training of highly skilled technicians first authorized under Title VIII of the National Defense Education Act of 1958 and also makes it possible for Federal vocational funds to be used in a wider variety of ways than previously permitted. The ground is broken, the foundation laid, for a dramatic increase in the number of curriculums designed to prepare technicians and other workers at the semiprofessional level.

Data obtained in the six surveys of organized occupational curriculums in higher education have been presented and used in various ways. The first three reports appeared in Office of Education Circulars numbered 512, 568, and 632. Each contained analyses of the data and detailed listings by States and by individual curriculums of the institutions which provided the required information. A condensed report of the fourth survey appeared in Higher Education, April 1961. Brief summary tables of information from the fifth and sixth surveys have appeared in the three issues of Digest of Educational Statistics. In addition, manuscripts which provide more detail about the fourth and fifth surveys are available in the Bureau of Educational Research and Development. Data from these manuscripts were used to prepare a background paper for an international conference on middle-level manpower held under the auspices of the Peace Corps in San Juan, Puerto Rico, October 10-12, 1962. Titled "The Training of Subprofessional Personnel in the United States," limited copies are available on request from the Bureau of Educational Research and Development.

Many reports have come to the Office of Education about the value of the institutional listings which were included in the first three survey publications. High school and college guidance workers state that the listings have been helpful for student counseling and program planning. This guide has been prepared to meet those needs. It should also be useful to institutions considering the introduction of organized occupational curriculums. They can refer to this guide for the names of institutions which offer these curriculums, the number of students each graduated between July 1, 1961, and June 30, 1962, and the number enrolled, full-time and part-time, on or near October 1, 1962.

A detailed interpretation and analysis of the information obtained in the sixth survey, as well as a discussion of trends and some projections, will appear in another publication of the Office of Education. It should be of value to a variety of individuals and groups who are concerned about the nation's need for increasingly larger numbers of technicians and other semiprofessional workers and how these needs can be satisfied.

The Office of Education gratefully acknowledges the cooperation of the registrars and other officials of institutions of higher education who made possible a 98.9 percent survey response.

R. Orin Cornett, Director
Division of Educational
Organization and Administration

APPENDIX A. Questionnaire 105

SUMMARY

This guide has been prepared from information obtained in the sixth survey of organized occupational curriculums in higher education. Returns were obtained from 98.9 percent of the 1,929 institutions to which questionnaires were sent. A copy of the questionnaire showing the instructions and criteria for inclusion in the survey is included as Appendix A.

The survey reveals programs of at least one but less than four years in length in 879 institutions of higher education in the United States. This is an increase of 2.4 percent from the number of institutions offering these curriculums two years earlier, as revealed in the fifth survey. Tables 1 and 2 summarize the data obtained in the sixth survey and table 2 also presents data for 1959-60.

The 1962 enrollment of 274,725 students in technician or semiprofessional level curriculums represents an increase of 10.8 percent over that of 1960. The reported total of 53,272 graduates between July 1, 1961, and June 30, 1962, was 2.3 percent higher than the number of graduates in the 12-month period two years earlier.

The six surveys present a picture of an increase in enrollments in each successive survey year and in the number of graduates in each successive survey year with the exception of a 3.6 percent decrease in the 12-month period July 1957 through June 1958 (third survey) from the previous 12-month period.

As in previous surveys, more than three-fifths of the students were enrolled on a full-time basis. Again there were very few women graduates of engineering-related curriculums, although there were almost twice as many women as men graduates of non-engineering-related curriculums.

Public 2-year institutions continue to dominate the survey. Their 316 reporting institutions, approximately 36 percent of the total number which offer organized occupational curriculums, account for 55 percent of the enrollments, and 41 percent of the graduates. The 173 privately controlled 2-year institutions rank second in enrollments and graduates; the 234 privately controlled 4-year colleges and universities third in enrollments and fourth in graduates; the 156 public 4-year colleges and universities fourth in enrollments and third in graduates.

Engineering-related curriculums account for 92,255 of the enrollments and 14,977 of the graduates. These numbers are, respectively, 6.3 percent greater and 5.7 percent fewer than for the fifth survey. Non-engineering-related curriculums account for 182,470 of the enrollments and 38,295 of the graduates; greater by 13.2 percent and 5.8 percent over 1959-60 data.

Although the total number of students was greater in 1962 than in 1960, three of the engineering-related and three of the non-engineering-related curriculum areas show decreases, especially education, down 40.7 percent, and aeronautical technology, down 21.2 percent. In the former instance it can be assumed that this is due to the rising standards for entry into teaching; it is becoming increasingly difficult to begin teaching with only two years of college preparation. It is not as easy to explain the drop in aeronautical technology, but it can be assumed that it is related to the drop-off in new hires by the aircraft plants. The same two curriculum areas also show the sharpest decreases in graduates between the fifth and sixth surveys. Only one other non-engineering-related and three other engineering-related curriculum areas show fewer graduates in 1961-62 from 1959-60.

The five leading organized occupational curriculum areas in terms of the number graduated in 1961-62 are business and commerce, electrical technology, health service, education, and mechanical technology. Education and health service changed places; otherwise the rankings were the same in 1959-60. The five leading curriculum areas in terms of 1962 enrollments are business and commerce, electrical technology, mechanical technology, health service, and architectural and civil technology. The first four curriculum areas maintain their relative 1960 rankings after education, which ranked fourth in 1960, dropped to sixth in 1962.

A copy of the questionnaire used to obtain information in the sixth survey of organized occupational curriculums in higher education appears in Appendix A. The figures typed on the questionnaire form represent the total responses in each cell.

Table 1. -- Number of graduates by sex, 1961-62, and full-time and part-time enrollment, fall 1962, in organized occupational curriculums in institutions of higher education: Aggregate United States

	Graduates			Enrollment		
	Total	Men	Women	Total	Full-time	Part-time
All organized curriculums	53,272	28,307	24,965	274,725	169,589	105,136
engineering-related	14,977	14,855	122	92,255	51,886	40,369
non-engineering-related	38,295	13,452	24,843	182,470	117,703	64,767

LISTINGS OF INSTITUTIONS WITH ORGANIZED OCCUPATIONAL CURRICULUMS

All of the institutions of higher education which reported information in the sixth survey of organized occupational curriculums are listed in the four tables which follow. Tables 3 and 4 present data on engineering-related curriculums; tables 5 and 6 on non-engineering-related curriculums. Tables 3 and 5 list the institutions by States; tables 4 and 6, by specific curriculums and by States.

The institutional data on technician and semiprofessional level curriculums are given in Part A of tables 3 and 5 and information on curriculums below the technician or semiprofessional level in Part B. It will be noted that the survey questionnaire (see Appendix A) requires only a single-line entry for each of the broad categories, engineering-related and non-engineering-related, for those curriculums below the technician or semiprofessional level. Data on technician or semiprofessional level curriculums were obtained in more detail for 41 engineering-related and 50 non-engineering-related curriculums.

In table 3 information about the institutions is arranged in the following sequence and the columns are numbered accordingly. Institutions are listed alphabetically by States in Part A and Part B.

1. State and name of institution

2. Type of institution, using the following abbreviations:

4-year institutions

UNIV	university
LIBL ARTS	liberal arts college
TCHRS COL	teachers college
TECHNOLOG	independently organized technological school
RELIG THE	theological or religious school
ART SCH	school of art
OTH PROF	other professional school

2-year institutions

JR COL	junior college
TECH INST.	technical institute
SEMI PROF.	other semiprofessional school

3. Control, by public or private

4. Graduates, July 1, 1961 - June 30, 1962

5 and 6. Enrollment on or near October 1, 1962, by full-time (column 5) and part-time (column 6).

Information about the 41 engineering-related curriculums at the technician level is arranged in the following sequence and the columns in table 4 are numbered accordingly:

Name of curriculum, with institutions which reported information about each curriculum listed alphabetically by States.

Type of award for programs two or more but less than four years, using the following abbreviations:

AA	Associate in Arts
AS	Associate in Science
AAS.	Associate in Applied Science
ABUS	Associate in Business
AC	Associate in Commerce or Commercial Science
AED	Associate in Education
AENG	Associate in Engineering
OAD.	Other associate degree
CD	Certificate or diploma
OTH	Other award

3. Type of award for programs at least one but less than two years, using the same abbreviations.

4. The letters ECPD in column 4 indicate that this curriculum was listed as approved by the Engineers Council for Professional Development, the nationally recognized accrediting agency for curriculums in engineering technology (then identified as curriculums "of a technical institute type"), in its 1961 list. This is evidence that the graduates reported in column 5 had completed an accredited curriculum.

5. Graduates, July 1, 1961 - June 30, 1962

6. The letters ECPD in column 6 indicate that this curriculum was on the 1962 ECPD list. This is evidence that the students reported in columns 7 and 8 were enrolled in accredited curriculums.

7 and 8. Enrollment on or near October 1, 1962, by full-time (column 7) and part-time (column 8).

The information in table 5 is arranged in the same way as that in table 3, except that the number of graduates is reported in two columns: column 4 for men and column 5 for women, and this changes the numbers of the enrollment columns to 6 (full-time) and 7 (part-time).

Table 6 presents information about the 50 non-engineering-related curriculums at the technician or semiprofessional level in the same sequence as for table 4 except that table 6 does not contain the ECPD columns, and there are two columns, men (column 4) and women (column 5), which show the number of graduates.

LISTINGS OF INSTITUTIONS WITH ORGANIZED OCCUPATIONAL CURRICULUMS

Table 3.--Graduates in 1961-62 and enrollment in fall 1962 in engineering-related organized occupational curriculums of 1, 2, or 3 years in higher educational institutions, by control, State, and institution: Aggregate United States

SURVEY OF ORGANIZED OCCUPATIONAL CURRICULUMS, 1961-62

GRADUATES AND ENROLLMENTS IN ORGANIZED OCCUPATIONAL CURRICULUMS OF AT LEAST 1 BUT LESS THAN 4 YEARS IN TECHNICAL INSTITUTES, JUNIOR COLLEGES, AND OTHER INSTITUTIONS OF HIGHER EDUCATION

If your institution has NO branches, check here ☐

If your institution has branches include data for them below:

THIS REPORT INCLUDES BRANCHES AS FOLLOWS:

THIS REPORT EXCLUDES BRANCHES AS FOLLOWS:

TO:

THE REGISTRAR
SUMMARY DATA
879
INSTITUTIONS OF HIGHER EDUCATION

TO THE REGISTRAR:

This is the sixth survey of enrollments and awards *in organized occupational curriculums of at least 1 but less than 4 years' duration* in institutions of higher education. This survey is part of a coordinated series of inquiries by the Office of Education concerned with the Nation's resources of trained manpower.

The portion of this survey pertaining to engineering-related curriculums is sponsored jointly by the Office of Education and the American Society for Engineering Education. Reports will appear in publications of these two agencies.

Most institutions offer only a few of the curriculums listed, and will be able to complete the form rather quickly.

A return envelope, requiring no postage, is enclosed for your convenience. The extra (unaddressed) copy of the form is for your use in making a file copy. Additional forms will be forwarded upon request.

Your prompt cooperation in completing the form will be greatly appreciated.

Sincerely yours,

Mapheus Smith, Acting Director
Division of Educational Statistics

CRITERIA FOR INCLUSION OF CURRICULUM IN SURVEY

This survey seeks data on enrollment and graduates of ONLY organized occupational curriculums. It is concerned with *whole curriculums, NOT individual courses.* For purposes of this survey, an organized occupational curriculum is one which meets all 5 of the following criteria;

1. High school graduation (or its equivalent), but no work beyond the high school, is required for admission to the curriculum. The general level of these curriculums is the first one to three years beyond high school.

2. The curriculum is a series of required and elective courses constituting an integrated program prescribed by the institution to assist in the general education and training of the individual, but more particularly, in his training as a future practitioner in a given occupation or cluster of occupations. A group of courses, even though all of them be in a given occupational area, does not necessarily constitute a curriculum.

3. The curriculum is designed to prepare students for immediate employment in an occupation or cluster of occupations. Individual courses in the curriculum may be creditable toward a bachelor's or first professional degree either in your institution or by transfer; however, the curriculum as an organized program is designed to educate or train primarily for occupational competence, rather than for transfer or degree credit. *The curriculum, itself, and its objectives should be classified, not the intentions or possible subsequent careers of the students involved.*

4. Completion of the curriculum requires at least 1 but less than 4 years of full-time attendance, or the equivalent in part-time attendance over a longer period. A "year" means an academic year of approximately 9 months.

5. The curriculum leads to a certificate, diploma, associate degree, or other formal award, signifying that the student has completed an organized curriculum in an occupational area; or the State grants a license or other formal recognition, without examination, to all graduates of the curriculum.

If you have no curriculum which meets all 5 of these criteria, put a check mark in the following box and return this form in the postage-free, addressed envelope enclosed. ☐

"A" AWARDS: In order to show the type of award given on completion of each curriculum, use the following abbreviations:

CD	–.Certificate or diploma	A.A.S.	– Assoc. in Applied Science	A.Ed.	– Assoc. in Education
A.A.	– Associate in Arts	A.Bus.	– Assoc. in Business	A. Eng.	– Assoc. in Engineering
A.S.	– Associate in Science	A.C.	– Assoc. in Commerce or Commercial Science	OAD	– Other Associate degree
				Oth	– Other award

In the case of an "other Associate degree" or an "other award," footnote the curriculum and write the title of the degree or award in the margin or on an additional sheet which should be attached to the form.

– 2 –

GENERAL INFORMATION

1. Information on each curriculum meeting *all 5* criteria is to be entered in the appropriate Part(s) of this form. The form is divided into three parts:

Part I covers engineering-and nonengineering-related curriculums *below* the technician or semiprofessional level
Part II covers engineering-related curriculums *at* the technician level
Part III covers nonengineering-related curriculums *at* the technician or semiprofessional level

Each part is divided to collect data on "Curriculums of 2 or More but Less than 4 Years," and "Curriculums of Less than 2 but at least 1 Year."

2. DO NOT REPORT students enrolled in home study or correspondence course programs. Extension and evening students are to be included if they are enrolled in an organized curriculum which meets *all 5* criteria listed on cover page.

3. Note that the figures to be entered in each part are for graduates during the previous year (July 1, 1961 through June 30, 1962), and for students enrolled on or near October 1, 1962.

4. In this report, a part-time student is one who is carrying less than 75% of the normal load of a full-time student defined according to the usages of your institution. In general, a full-time load is considered to be 16 "hours" of classroom work per week, counting 2 laboratory of shop "hours" as the equivalent of 1 classroom "hour"; consequently, a part-time student would be one carrying less than 12 "hours" per week. Students in cooperative work-and-study programs will ordinarily be reported as full-time students, but the duration of their curriculums should be reckoned in terms of the total amount of academic course work. If necessary, however, these definitions should be modified as local conditions may require.

5. For each curriculum at the technician or semiprofessional level (PARTS II and III), review the curriculum titles and enter the requested data opposite the title which most nearly describes the curriculum. If you do not find a title or a group designation that represents the curriculum, write its title in one of the spaces provided at the end of the list, and give the requested information on the same line.

6. If more space is needed to explain an entry you have made, footnote the entry and write the explanation in the margin or on an additional sheet which should be attached to the form.

SPECIFIC INSTRUCTIONS FOR PARTS I, II AND III

PART I, CURRICULUMS BELOW THE TECHNICIAN OR SEMIPROFESSIONAL LEVEL is for reporting on curriculums whose content (whether engineering-related or nonengineering-related) is at a level of academic complexity *below* that offered in the training of technicians and semiprofessional personnel. Work *at* this level is *not* creditable toward a bachelor's or higher degree. For curriculum *below* the technician or semiprofessional level, complete this part with total figures only. NOTE: These data are in no way included in the curriculums *at* the technician or semiprofessional level. DO NOT REPORT DATA FOR INDIVIDUAL COURSES.

PART II, CURRICULUMS AT THE TECHNICIAN LEVEL – ENGINEERING-RELATED covers engineering-related fields and is for reporting curriculums designed to prepare scientific and engineering technician personnel. Such curriculums are offered frequently, but not exclusively, in "technical institutes." The following definition of technician has been adopted by the President's Committee on Scientists and Engineers:

". . .the engineering or scientific technician is usually employed in (1) research, design or development; (2) production, operation, or control; (3) installation, maintenance or sales. When serving in the first of these functional categories, he usually acts as direct supporting personnel to an engineer or scientist. When employed in the second category, he usually follows a course prescribed by a scientist or engineer but may not work closely under his direction. When active in the third category, he is frequently performing a task that would otherwise have to be done by an engineer.

"In executing his function the scientific or engineering technician is required to use a high degree of rational thinking, and to employ post-secondary school mathematics and the principles of physical and natural science. He thereby assumes the more routine engineering functions necessary in the growing technologically based economy. He must effectively communicate scientific or engineering ideas mathematically, graphically and linguistically."

This definition should serve to distinguish technicians and semiprofessional personnel from artisans, craftsmen, and skilled operators who are to be reported in PART I.

PART III, CURRICULUMS AT THE TECHNICIAN OR SEMIPROFESSIONAL LEVEL – NONENGINEERING-RELATED covers nonengineering-related fields and is for reporting curriculums which are at an analogous level of academic complexity and are designed to develop technicians and semiprofessional personnel in the fields listed, as distinct from clerical and routine workers.
